A Start

# Industry Analysis

1:30 PM

Supplier Power

**Medium**

- Semiconductors
- Lots of different producers of console hardware

Buyer Power

**Low**

- Only 3 major players
- Switching cost is high for consumers

Threat of New Entrants

**Low**

- Brand Recognition
- Exclusive games
- Economies of Scale

Substitution

**High**

- Many Substitutes [any leisure ent. activity]
- Substitutes are improving

Competitive Rivalry

**High**

- Microsoft
- Sony
- Nintendo

-/+ Options Start

# Internal Analysis

**History**

**Mission and Values**

# Internal Analysis

## History

- Founded in **1889** by Fusajiro Yamauchi
- Produced Hanafuda “flower cards” for over **70 years**
- Expanded in **1963**

## Mission and Values

Putting Smiles on the  
Faces of Everyone  
Nintendo Touches

# Internal Analysis

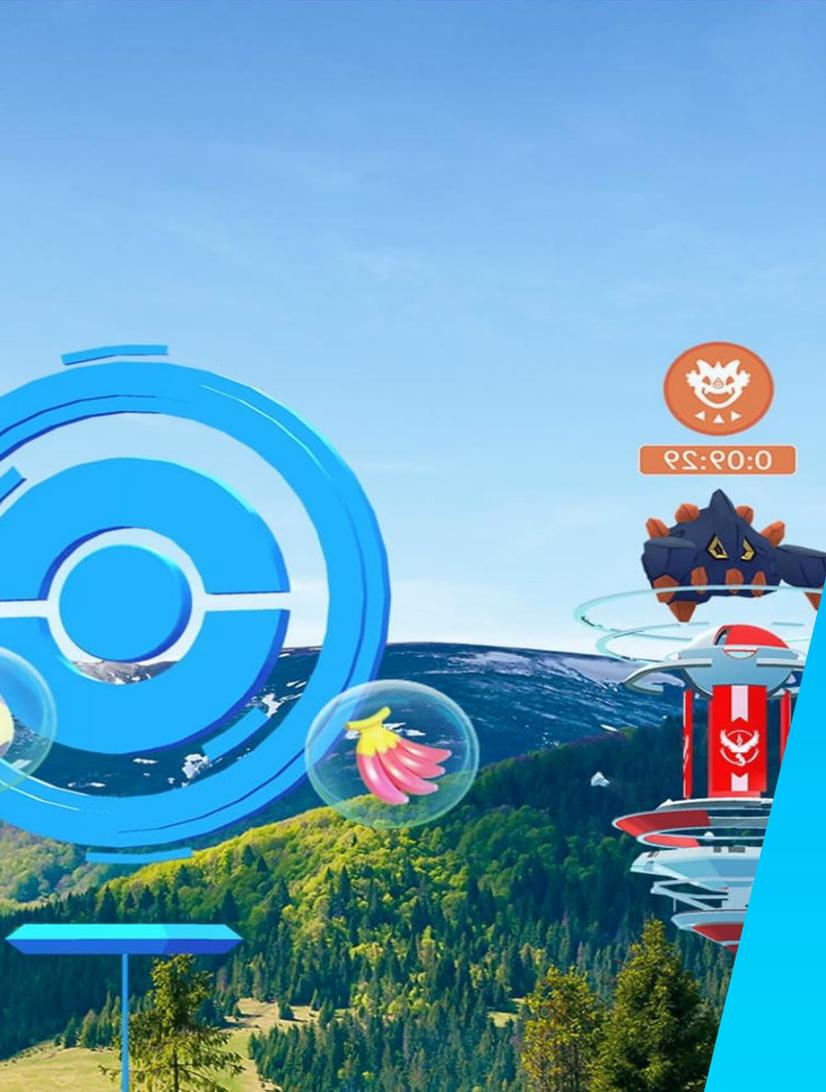

## History

## Mission and Values

- Mission: “To treat every **customer** with attention, consideration, and respect”
- Customer-focused
- Value **all types** of customers
- Foundation to pivot to **tech & entertainment**

# New Technology

- Focus on Hardware Development (ex: game consoles, game accessories, game-specific studios)
  - Ex. “Switch Pro” rumored to be released in 2024
  - Implementing VR Reality Tech
- Smart Devices
  - i.e. Pokemon GO Plus Bracelet

# Entertainment Partners

- To Amplify Popularity of existing IP
- Impact all types of customers to new levels
- Leverage IP while prioritizing innovation
- Ex: Super Mario Bros. Movie + Super Nintendo Land at Universal Studios

## Pre-Pandemic Financial Success:

- Increasing in operating profit
- Doubled net assets
- Uptick in cash flow
- Successful adaptation of Super Mario Bros into theatrical property, helping them move into themed entertainment.

## Post-Pandemic Financial Issues

- Declined operating profit alongside cash flow from financing activities since 2021
- Decreased YOY in both production and sales across all categories

# Strategic Problems

Shrinking  
Leisure Time

Customer  
Dissatisfaction

Supply Chain  
Disruptions

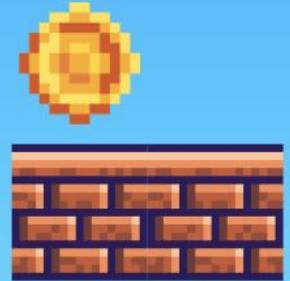

## Shrinking Leisure Time

- Post-pandemic: leisure time and consumer engagement on decline
- “Hardcore” gamers maintain active online habits
- Casual gamers—the Switch’s target audience—are leaving consoles at home and returning to offices

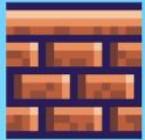

## Customer Dissatisfaction

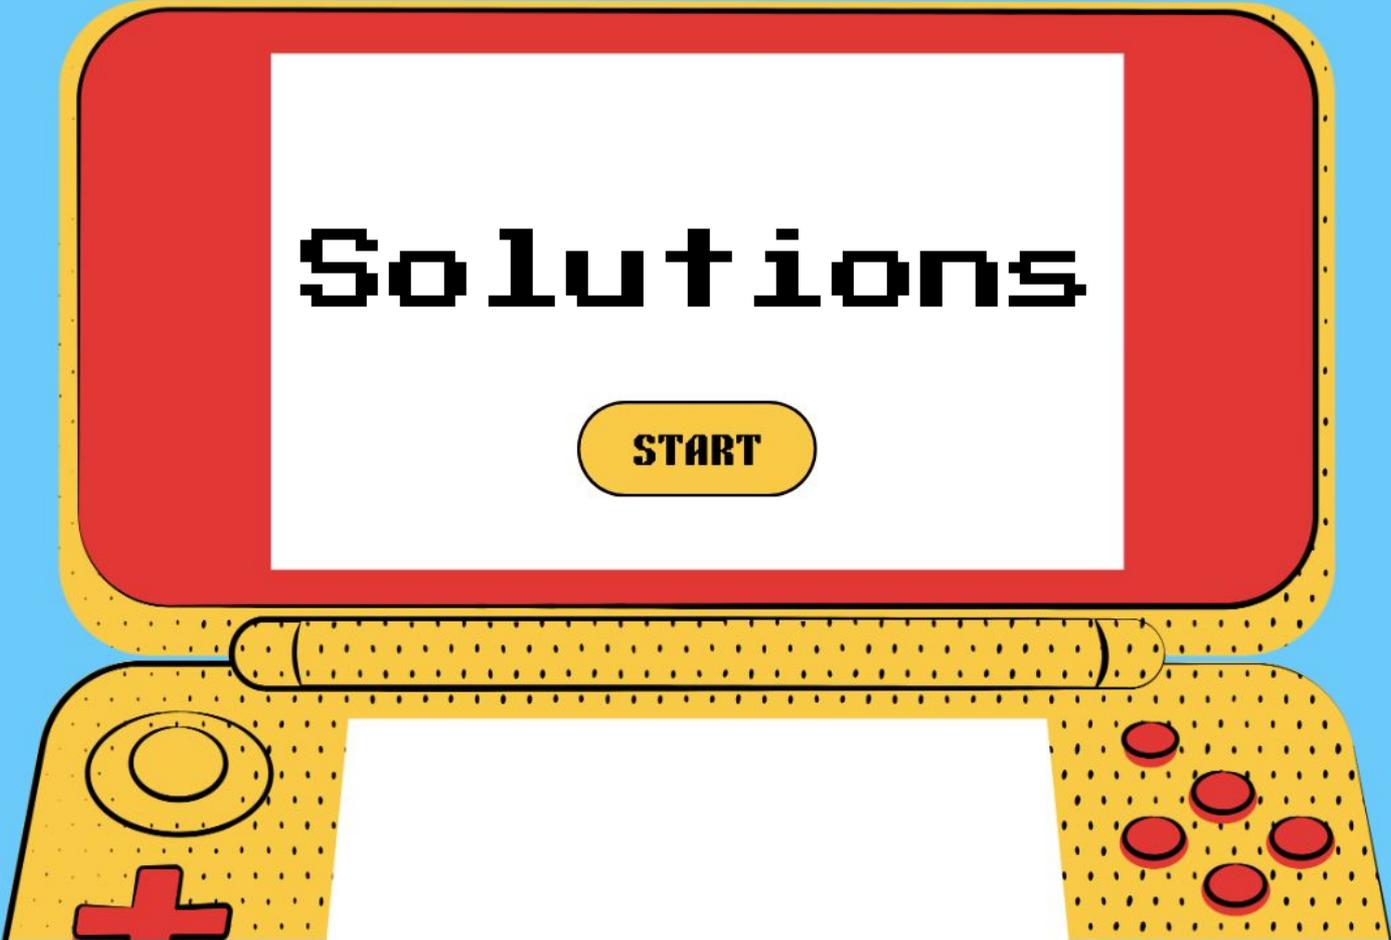

- Nintendo fans have taken to community forums to express their fatigue with IP that feels tired, or at the very least, lacking “creativity.”
- Highly-stylized games require significant development time, which limits the amount of new IP the company releases.

## Supply Chain Interruption

- Semiconductor shortages from supplier TSMC make Switch impossible to manufacture and sell
- Nintendo and competitors suffering same losses
- Larger questions about how to prevent and adapt

A stylized, retro handheld gaming console is centered against a light blue background. The console has a yellow body with a black dotted pattern and a red screen area. The screen displays the word "Solutions" in a black, pixelated font. Below the screen is a yellow button labeled "START". The console also features a red directional pad on the left and several red buttons on the right.

**Solutions**

**START**

# SOLUTIONS : STRATEGIC PROBLEM #1

## Shrinking Leisure Time

### Discontinue the DS

- DS cannibalizes Switch sales
- Push harder on Switch (Lite, etc.) at various prices to target price sensitive customers and new gamers
- Cuts costs and streamlines production
- Ability to capitalize off the nostalgia with DS 20th and 25th anniversary limited edition launches
- Possible backlash from loyal fans

### Airline Seatback Entertainment Gaming

- License simplified versions of Nintendo games to Delta/United/American Airlines
- Cost effective and utilizes current IP
- Builds approachable brand
- Targets new audiences with untapped leisure time
- Hard to predict seatback to console sales

# RECOMMENDATION #1

## Nintendo iPad Joy-Con

A partnership with Apple to give users the ability to turn their iPad devices into a makeshift Nintendo console, much like an even “lite-er” version of the Switch, with access to Nintendo games.

- This strategic partnership allows Apple to move into the gaming space utilizing Nintendo IP.
- Tap into younger, inexperienced gamer market at a lower price point.
- Prevent other large companies' direct entrance into the market

# SOLUTIONS : STRATEGIC PROBLEM #2

## Customer Dissatisfaction

### Dedicate Team for Small IP Development

- Focus on lower-budget, high-quality niche games to build out independent fanbases
- We suggest: internal small-title games team or acquiring a company like Deck Nine Games
- Expands gamer demographics and builds cult following

### Re-Launching Nintendo Esports

- Re-approach competitive Smash gameplay with new rules and regulations and adjusting current IP (i.e. Nintendo Sports lines, Mario Kart, etc.) for competitive gameplay
- Partner with Tencent to execute
- Builds loyalty, excitement, and conversation around Nintendo IP

## RECOMMENDATION #2

### Key Adapter of Entertainment IP

Expand existing Universal deal to allow Nintendo to create action-adventure, role-player, platformer, or other types of quality gaming of their popular franchises.

- Develop games like The Secret Life of Pets, The Lorax, Minions or more adult media like The Boys on Amazon Prime
- Market existing Nintendo IP with films and attractions like Mario and Zelda while also providing new, diverse IP to existing Switch users.

# SOLUTIONS : STRATEGIC PROBLEM #3

## Supply Chain Interruption

### Vertical Integration

- Bring chip manufacturing in-house (Like Apple's M1)
- Builds competitive advantage as there are not many suppliers, and no other game companies do this
- Creates new revenue streams with ability to sell excess chips to competition
- Extreme overhead, outside of the scope of Nintendo's focus

### Changing Suppliers

- Ex: Qualcomm (Apple currently using with plans to end)
- Curbs competition for same small group of TSMC chips
- Economies of scale counteracted by more Switch sales and being able to meet demand
- Expensive and possibly risky as it puts the future of Switch sales into the hands of a smaller company

## RECOMMENDATION #3

### Supply Chain Digitization and Predictive Analytics

AI supply chain optimization, updated warehouse-management, and measures for forecasting demand and performance analytics.

- Adjusts for chip shortages
- Addresses customer demand changes, quickly informing suppliers to avoid component manufacturing bottlenecks
- Better communication with many suppliers and thus better relationships

# Timeline

PLAY

# iPad Joy-Con Timeline

## Immediate

Conversations,  
negotiations, and  
licensing with Apple

## 1 Year

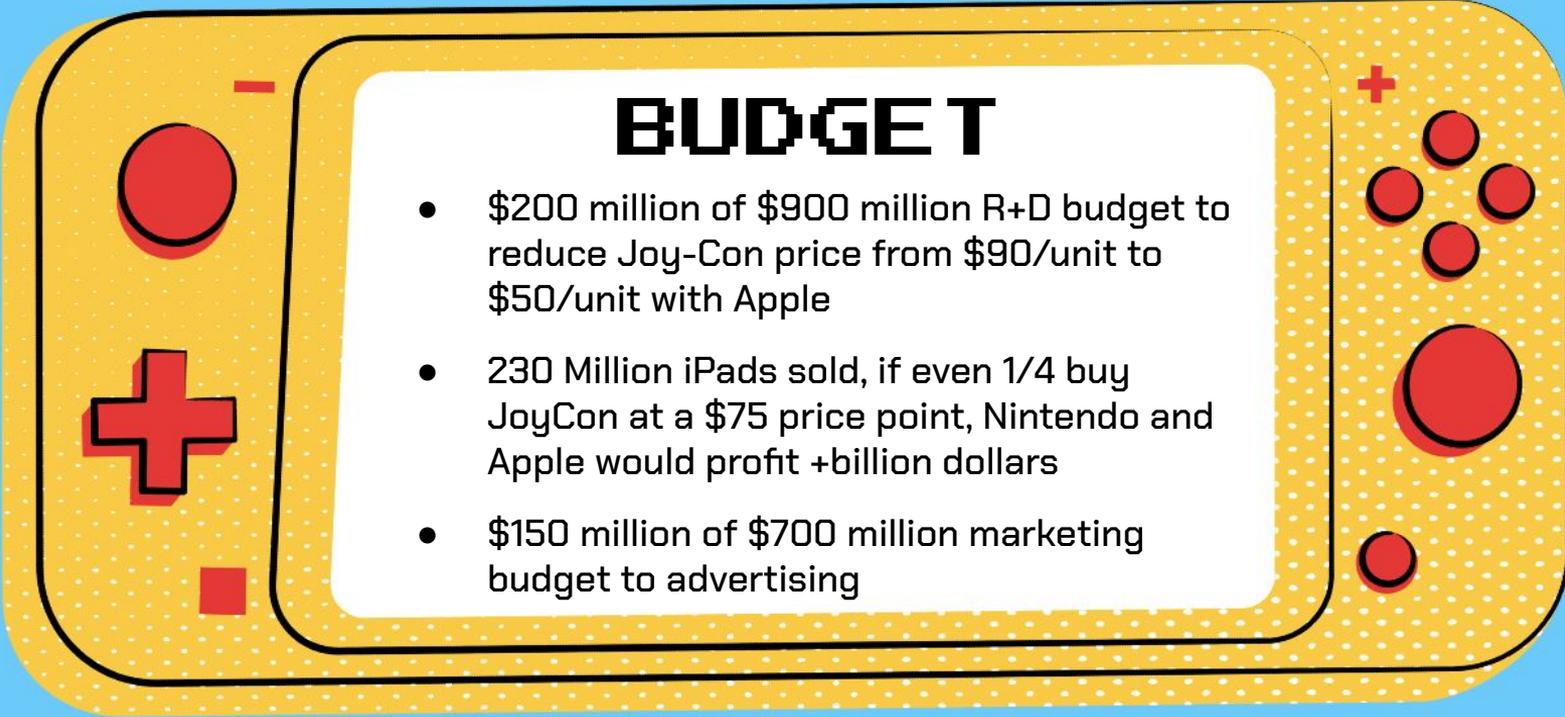

Invest portion of  
\$900mm R+D budget  
in design

## 1.5 Years

Begin manufacturing  
and marketing  
campaign

# BUDGET

- \$200 million of \$900 million R+D budget to reduce Joy-Con price from \$90/unit to \$50/unit with Apple
- 230 Million iPads sold, if even 1/4 buy JoyCon at a \$75 price point, Nintendo and Apple would profit +billion dollars
- \$150 million of \$700 million marketing budget to advertising

# Key Adapter Timeline

## Immediate

Conversations and renegotiations with Universal Studios

## 1 Year

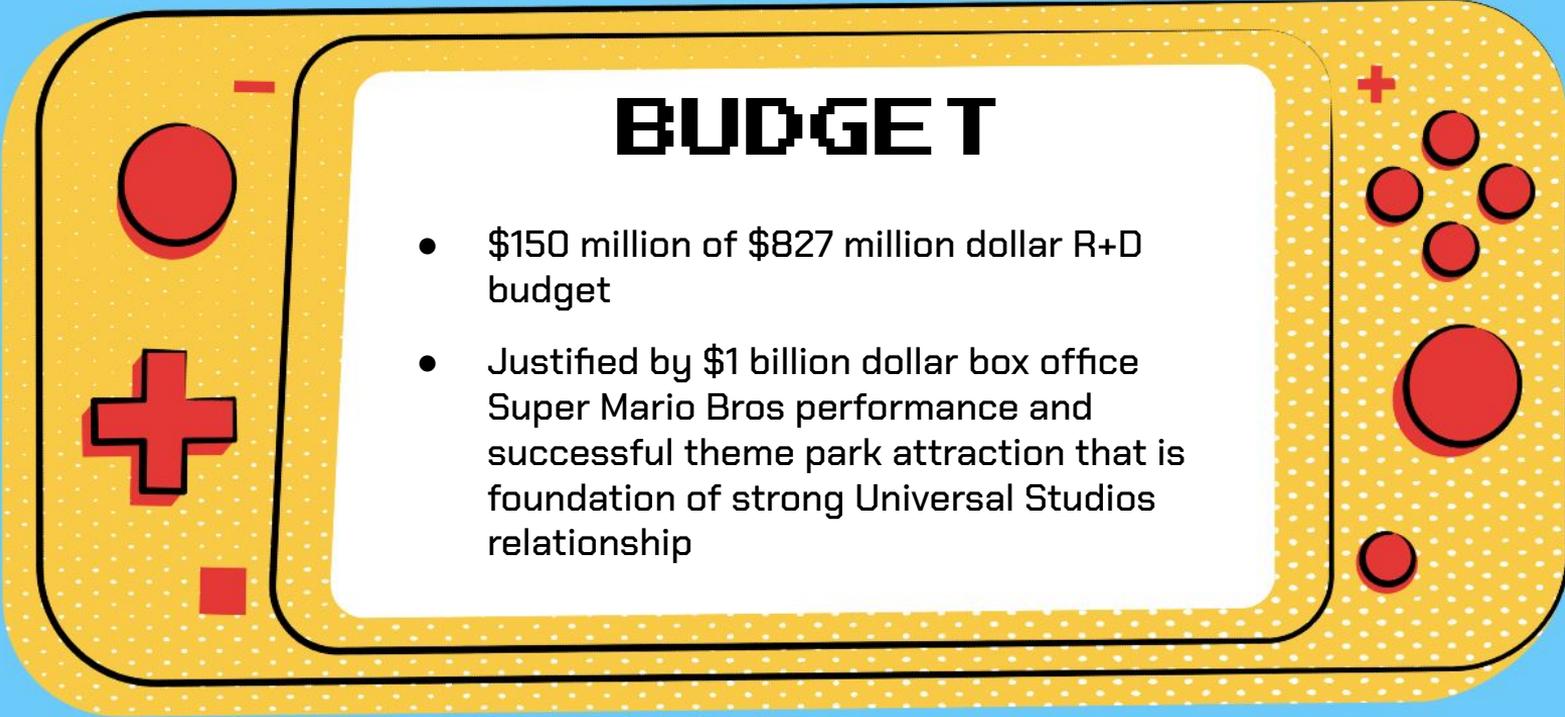

Development begins on first game adaptation

## 5 Years

Release of first Nintendo / Universal game on Switch

# BUDGET

- \$150 million of \$827 million dollar R+D budget
- Justified by \$1 billion dollar box office Super Mario Bros performance and successful theme park attraction that is foundation of strong Universal Studios relationship

# Supply Chain Digitization Timeline

## Immediate

Conduct supply chain assessments, hire necessary personnel

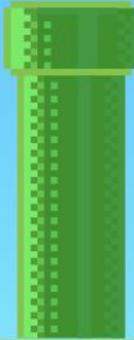

## 6 months

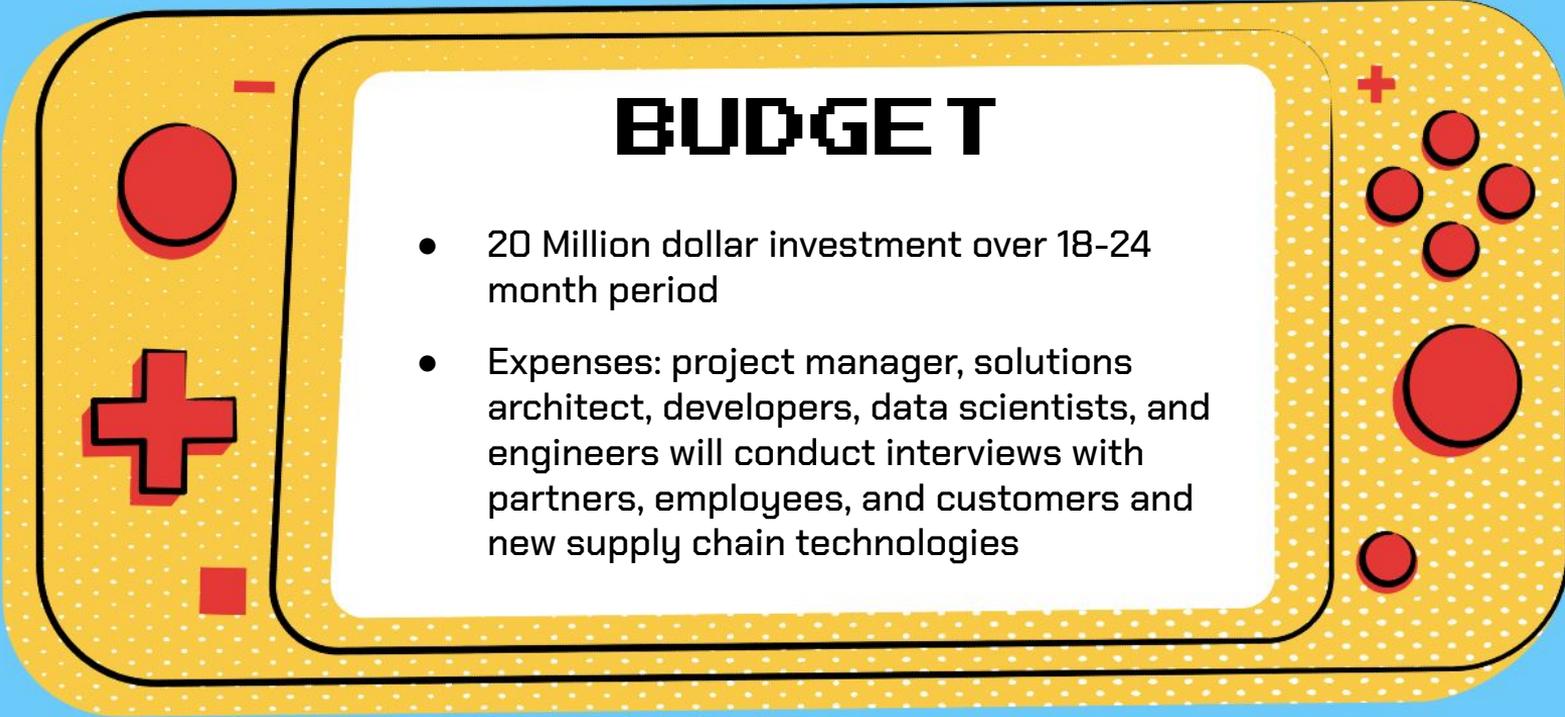

Review survey and set goals: launch AI Supply Chain Automation, warehouse management, establish demand forecast metrics

## 2 Years

Completion of Supply Chain Digitization and Predictive Analytics

# BUDGET

- 20 Million dollar investment over 18-24 month period
- Expenses: project manager, solutions architect, developers, data scientists, and engineers will conduct interviews with partners, employees, and customers and new supply chain technologies

# Nintendo®
